# Reflective Transfers

Reflective transfer film  
from an industry leading brand.

**Reflective Transfers** are produced with industry leading 3M™ Scotchlite™ branded retroreflective transfer films, which provide a high level of reflectivity when illuminated in low-light and nighttime conditions. These transfer films are designed to embellish a wide range of textiles, including safety wear, high visibility garments, uniform workwear and recreational activewear.

Scotchlite™ transfer films are available in a range of technical formats and colours, including fluorescent yellow, fluorescent orange, industrial launderable and flame resistant. They come with an array of specifications and CSA, ANSI, ISEA and NFPA certifications, which outline the properties and attributes for reflectivity, application, wash and care, and physical performance. The transfers are constructed with adhesives that allow for commercial laundering with wash temperatures up to 140°F (60°C) or industrial laundering with wash temperatures up to 185°F (85°C). Like all retro-reflective coated surfaces, excessive wear, abrasion and multiple launderings will reduce the reflective properties over time.

Reflective transfers are produced on an adhesive carrier and can be heat seal applied in approximately 20 seconds. The carrier can be removed from the garment once the transfer has cooled. If required, customers can take advantage of Emblemtek's application and garment handling services. Reflective transfers can also be formatted as emblems when applied to twill, high visibility or flame resistant fabrics or emblem blanks.

Industry leading  
reflective properties.
